

Directions for using the 2 feet Reflecting Telescope

Hold out the feet and place it on a steady support - unscrew the cell with dark glass from the Eye piece, which is only to be used when viewing the Sun, direct the Telescope to the Object, and while looking, turn the screw adjusting rod at the side gently round to the right or left as may be necessary till the Object is seen the best defined possible - In this way the Telescope is adjusted for different Eyes and different distances

To increase the Magnifying power in Bright Atmospheres, unscrew the present long eye piece and screw the shorter one in its stead - The Magnifying power with the long eye piece is 60 times with the Short one 90 times -

Card to be taken when done with to shut it up in its box and keep it in a dry place

Mantel must not be touched by the feet

Now a very beautiful well
defining Telescope -

Take great Care not to allow it to
be exposed in damp weather and
that no one touches the Metals
with their Fingers
